

Chapter 1: Programming Fundamentals

Monday, August 1, 2022

1:35 PM

1. What is Programming?

The way you communicate with the world in **Hindi, Bengali or English**, Programming is **the way of communication with computer**. We need a programming language to communicate with computer so python is one kind of programming language.

Programming in one line : A way to instruct computer to perform various task as per the user need.

2. What is Python?

Object-oriented, High-level and interpreted language. An easy to code language.

- **Object - Oriented**: It follows the principles of object-oriented programming (OOP).
- **High Level** - A high-level programming language is one that is designed to be easily understandable and writable by humans.
- **Interpreted**: An interpreted language, which means that you can write and run code without the need for a separate compilation step. This makes development and debugging faster

Install Python Like a GAME! LOVE IT LIKE YOUR FRIEND, Python will never cheat you!!

The coding language which lies in the heart of budding engineers!

Happy Coding :) . with love Randrita :)
